

Baseline: gemma4:12b P(A)

<= marks an upper bound when the API omitted exact P(A); not a zero or an estimated exact score. No score cutoff applied.
* Assisted USB crop. M8 and square pins excluded. Raw P(A) is not calibrated correctness; all four models use identical crop files and prompts.

Scene 101: gemma4:12b P(A)

<= marks an upper bound when the API omitted exact P(A); not a zero or an estimated exact score. No score cutoff applied.
* Assisted USB crop. M8 and square pins excluded. Raw P(A) is not calibrated correctness; all four models use identical crop files and prompts.

Scene 202: gemma4:12b P(A)

<= marks an upper bound when the API omitted exact P(A); not a zero or an estimated exact score. No score cutoff applied.
* Assisted USB crop. M8 and square pins excluded. Raw P(A) is not calibrated correctness; all four models use identical crop files and prompts.

Scene 303: gemma4:12b P(A)

<= marks an upper bound when the API omitted exact P(A); not a zero or an estimated exact score. No score cutoff applied.
* Assisted USB crop. M8 and square pins excluded. Raw P(A) is not calibrated correctness; all four models use identical crop files and prompts.
